

RADIANT URANIUM COMPLETES CROSS LAKE PROPERTY TRANSACTION

October 6th , 2026 - Vancouver, BC, Canada - Radiant Uranium Corp. (the “**Company**” or “**Radiant Uranium**”) (CSE:RUC, OTCQB:RUCCF, FWB:V000) is pleased to announce that, further to its news release on September 22, 2026 in respect of the option (the “**Option**”) to acquire the 2,048 hectare Cross Lake uranium property, southwest of the Key Lake Mine located in Athabasca Basin, Saskatchewan, Canada from Bromell Mining LLP (the “**Vendor**”), the Company has today issued 4,000,000 common shares (the “**Consideration Shares**”) and paid \$20,000 to the Vendor pursuant to the Option.

The Consideration Shares are subject to restrictions on resale until February 7, 2027, in accordance with applicable securities laws.

Cross Lake uranium mineralization is associated with pegmatitic garnetiferous gneiss along a 2.4 km northeast-trending structural lineament, with mineralized zones identified at the Narrows, Portage and Cross uranium showings. Historic work at the Narrows Zone outlined mineralization over a true width of approximately 11 to 15.8 metres, with drilling testing the zone to a depth of about 75 metres. This work resulted in a 1979 historic estimate of 371,038 lbs U₃O₈ at an average grade of 1.2435 lbs per tonne to a depth of 75 metres.

Clive Massey CEO, President and Director of Radiant Uranium commented, “The Cross Lake uranium project marks a significant advancement for our portfolio. The project presently contains historical estimate of 371,038 lbs of U₃O₈ and is open to depth.” Mr. Massey commented further, “The Company remains committed to advancing its projects responsibly, with a focus on environmental stewardship, strong community engagement including partnerships with indigenous groups and sustainable development practices.”

The historical estimates for Cross Lake was disclosed in “*Bralorne Resources Limited, 1979 Winter Drilling of the Narrows Zone ML 5255 (Formerly CBS 1074), Foster River Area, Saskatchewan*” by Rene Bissonnette and dated May 12, 1979. The Company believes the estimate is relevant to readers as it attests to the potential of the Cross Lake property. The historic estimate author noted although the drilling was not detailed enough to prove the structure nor to estimate proven reserves, possible reserves based on the grades and thicknesses of the mineralized intersections from the drillholes and the interpreted structure have been conservatively estimated. Each drill intersection is lettered, with a block shown for the better intersections. The dimensions of each block are based on the following parameters: 1) true thickness of the mineralized zone (width): core length of the mineralized section

corrected for the dip of the layer and the inclination of the drillhole; 2) length of the mineralized zone (length): one-half the distance between each mineralized intersection on the 50m plan, and 5m beyond the last significant mineralized intersection in the zone. As the bottom of the deepest intersection of the best mineralized zone is in drillhole 41-3 at a vertical depth of 71m, 330,000 tonnes corresponding to a vertical depth of 75m appear reasonable. The historic estimate would be comparable to an inferred resource but was prepared prior to current mineral resource classifications. The Company is not aware of a more recent historic estimate, though a small drill program in 2008 by Uracon Resources Ltd. did confirm the presence of uranium in the area of the historic estimate. Twinning of a number of holes and infill drilling would be required to move the historic estimate to a current mineral resource.

Radiant Uranium cautions investors a qualified person has not done sufficient work to classify the historical estimate as current mineral resources or mineral reserves and further cautions Radiant Uranium is not treating the historical estimate as a current mineral resource or mineral reserve.

Agreement Terms

Radiant Uranium can obtain a 100% interest, subject to a 1% Net Smelter Return Royalty, from the Vendor by meeting the following terms:

1. Paying an aggregate of \$200,000 to the Vendor as follows:
2. \$20,000 upon CSE approval; (Paid)
3. \$40,000 on or before the first anniversary; and
4. \$140,000 on or before the third anniversary;
5. Issuing to the Vendor 4,000,000 common shares upon CSE approval; (Issued) and
6. Incurring \$250,000 in Exploration Expenditures on or before the third anniversary.

Qualified Person

The technical information in this release has been reviewed and approved by Tim Henneberry, P.Geo, a Qualified Person as defined under National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*, who is a consultant to, and a director of, the Company.

About Radiant Uranium Corp.

Radiant Uranium Corp. is a Canadian mineral exploration company focused on uranium assets that support the global transition to reliable, clean energy. The Company's flagship project, the Key Lake Road Uranium Project, is located within Saskatchewan's prolific Athabasca Basin — one of the world's premier uranium districts. Radiant Uranium is committed to responsible exploration, detailed technical work, and value creation for shareholders through disciplined capital allocation and market engagement.

Forward-Looking Statements

This news release contains “forward-looking information” and “forward-looking statements” (collectively, “forward-looking statements”) within the meaning of applicable Canadian securities legislation. All statements, other than statements of historical fact, are forward-looking statements and are based on expectations, estimates and projections as at the date of this news release. Forward-looking statements are generally identifiable by use of the words “expects,” “plans,” “anticipates,” “believes,” “intends,” “estimates,” “projects,” “potential,” “scheduled,” “targeted,” “will,” “would,” “may,” “could,” “should” or similar expressions, and the negative thereof, though the absence of such words does not mean a statement is not forward-looking.

Forward-looking statements in this news release include, but are not limited to, statements relating to: the Company’s planned exploration activities; the Company’s business strategy, objectives and future plans; and the exploration potential of the properties. Forward-looking statements are based on certain assumptions and analyses made by the Company in light of the experience and perception of historical trends, current conditions and expected future developments, as well as other factors the Company believes are appropriate, and are subject to risks and uncertainties. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. Factors that could cause actual results to differ materially from those in the forward-looking statements include, but are not limited to: delays or failure to obtain required permits and regulatory approvals; the outcome of First Nations and stakeholder consultation processes; general economic, market and business conditions; fluctuations in uranium prices and demand; risks inherent in mineral exploration, including environmental and permitting risks; seasonal weather conditions that may delay exploration activities; changes in applicable laws, regulations and government policies; the availability of financing on acceptable terms; the Company’s ability to retain qualified personnel and contractors; geopolitical instability and its impact on commodity markets; and other risks and uncertainties described in the Company’s public filings with applicable Canadian securities regulators, available on SEDAR+ at
